PROTOCOL

ROCKETDOGE is based on Binance Smart Chain. Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency than other, competing chains. With decentralized exchanges on BSC offering lightning-fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for Decentralized Finance (Defi). BSC uses a token protocol developed by the BinanceTeam called BEP-20. Known for 5 second block speeds much faster than doge with 1 mte block speeds.

	Binance Smart Chain (BSC)
Number of Unique Addresses	439,672
Average Block Time	3 seconds
Average Gas Price	22.5560 gwei

Currently, the average block time is 3.00 seconds, average gas fee (transaction fee) amounts to 22.5560 gwei on Binance Smart Chain, making it one of the blockchain networks with the lowest transaction costs in the market.

HOW DOES IT WORKS ?

RocketDoge works on the automated market maker (AMM) model instead of the traditional market model, in which there is a seller and a buyer. In the AMM model, traders trade digital assets using permissionless liquidity pools.

People deposit their funds in these liquidity pools. They receive an LP (liquidity provider) token in return. They also receive a fee for making their assets available for lending. Liquidity Provider receives amount of 3% when others contribute. RocketDoge has no rewards program but receives contributions from the ecosystem. On the other side, people who want to use this liquidity pay a fee to the DeFi platform. This fee is later distributed among people who have contributed to the pool. Out of this pool, a nominal amount is kept in the RocketDoge treasury to maintain the platform.

The AMM model lets you earn by creating liquidity for the pool. The more you contribute, the more you get in return. You can trade LP tokens for profits. In addition, they can be farmed in another type of liquidity pool to earn RocketDoge's native BEP-

20 tokens known as ROCKETDOGE. People can stake their tokens to earn even more rewards from the liquidity pools.

WHAT CAN YOU DO ?

The first thing you need to do on the RocketDoge platform is to add liquidity to the pool. People invest in the liquidity pools and collect a fee and ROCKETDOGE in exchange. These are all BEP-20 standard tokens. Investors use these tokens in various ways to earn profits on the RocketDoge.

- **Trading:** It supports trading in BEP-20 tokens. It is very similar to crypto trading.
- **Farming:** The LP tokens earned by adding liquidity previously can be farmed in the RocketDoge platform, which provides a way to collect its own governance coin ROCKETDOGE.
- **Staking:** You can stake ROCKETDOGE in the staking pools to earn even more rewards. Once you decide to cash in the rewards, you have to harvest the crop. You end up locking in your investment for a fixed time. Staking is a lot simpler for beginners, as you don't need to do everything on your own. Once you have staked your ROCKETDOGE, you can relax and earn a passive income.
